

ICONS 2016

Forward

The Eleventh International Conference on Systems (ICONS 2016), held between February 21-25, 2016 in Lisbon, Portugal, continued a series of events covering a broad spectrum of topics. The conference covered fundamentals on designing, implementing, testing, validating and maintaining various kinds of software and hardware systems. Several tracks were proposed to treat the topics from theory to practice, in terms of methodologies, design, implementation, testing, use cases, tools, and lessons learnt.

In the past years, new system concepts have been promoted and partially embedded in new deployments. Anticipative systems, autonomic and autonomous systems, self-adapting systems, or on-demand systems are systems exposing advanced features. These features demand special requirements specification mechanisms, advanced behavioral design patterns, special interaction protocols, and flexible implementation platforms. Additionally, they require new monitoring and management paradigms, as self-protection, self-diagnosing, self-maintenance become core design features.

The design of application-oriented systems is driven by application-specific requirements that have a very large spectrum. Despite the adoption of uniform frameworks and system design methodologies supported by appropriate models and system specification languages, the deployment of application-oriented systems raises critical problems. Specific requirements in terms of scalability, realtime, security, performance, accuracy, distribution, and user interaction drive the design decisions and implementations. This leads to the need for gathering application-specific knowledge and develop particular design and implementation skills that can be reused in developing similar systems.

Validation and verification of safety requirements for complex systems containing hardware, software and human subsystems must be considered from early design phases. There is a need for rigorous analysis on the role of people and process causing hazards within safety-related systems; however, these claims are often made without a rigorous analysis of the human factors involved. Accurate identification and implementation of safety requirements for all elements of a system, including people and procedures become crucial in complex and critical systems, especially in safety related projects from the civil aviation, defense health, and transport sectors.

Fundamentals on safety-related systems concern both positive (desired properties) and negative (undesired properties) aspects. Safety requirements are expressed at the individual equipment level and at the operational-environment level. However, ambiguity in safety requirements may lead to reliable unsafe systems. Additionally, the distribution of safety requirements between people and machines makes difficult automated proofs of system safety. This is somehow obscured by the difficulty of applying formal techniques (usually used for equipment-related safety requirements) to derivation and satisfaction of human-related safety requirements (usually, human factors techniques are used).

The conference had the following tracks:

- Specialized systems
- Security and protection systems
- Embedded and IT systems

The conference also featured the following symposium:

- **EMBEDDED 2016, *The International Symposium on Advances in Embedded Systems and Applications***

We take here the opportunity to warmly thank all the members of the ICONS 2016 technical program committee, as well as the numerous reviewers. The creation of such a high quality conference program would not have been possible without their involvement. We also kindly thank all the authors that dedicated much of their time and effort to contribute to ICONS 2016. We truly believe that, thanks to all these efforts, the final conference program consisted of top quality contributions.

Also, this event could not have been a reality without the support of many individuals, organizations and sponsors. We also gratefully thank the members of the ICONS 2016 organizing committee for their help in handling the logistics and for their work that made this professional meeting a success.

We hope ICONS 2016 was a successful international forum for the exchange of ideas and results between academia and industry and to promote further progress in the field of systems. We also hope that Lisbon, Portugal, provided a pleasant environment during the conference and everyone saved some time to enjoy the beauty of the city.

ICONS 2016 Advisory Committee

Mark Austin, University of Maryland, College Park, USA

Raimund Ege, Northern Illinois University, USA

Hermann Kaindl, Vienna University of Technology, Austria

Leszek Koszalka, Wroclaw University of Technology, Poland

Marko Jäntti, University of Eastern Finland, Finland

ICONS 2016 Committee Chair

Gary Weckman, Ohio University, USA

EMBEDDED 2016 Advisory Committee

Sabina Jeschke, RWTH Aachen University, Germany

I-Cheng Chang, National Dong Hwa University, Taiwan

Ralf-D. Kutsche, TU Berlin / Fraunhofer FOKUS institute, Germany

Albert M. K. Cheng, University of Houston, USA
