

BIOTECHNO 2019

Forward

The Eleventh International Conference on Bioinformatics, Biocomputational Systems and Biotechnologies (BIOTECHNO 2019), held between June 02, 2019 to June 06, 2019 - Athens, Greece, covered these three main areas: bioinformatics, biomedical technologies, and biocomputing.

Bioinformatics deals with the system-level study of complex interactions in biosystems providing a quantitative systemic approach to understand them and appropriate tool support and concepts to model them. Understanding and modeling biosystems requires simulation of biological behaviors and functions. Bioinformatics itself constitutes a vast area of research and specialization, as many classical domains such as databases, modeling, and regular expressions are used to represent, store, retrieve and process a huge volume of knowledge. There are challenging aspects concerning biocomputation technologies, bioinformatics mechanisms dealing with chemoinformatics, bioimaging, and neuroinformatics.

Biotechnology is defined as the industrial use of living organisms or biological techniques developed through basic research. Bio-oriented technologies became very popular in various research topics and industrial market segments. Current human mechanisms seem to offer significant ways for improving theories, algorithms, technologies, products and systems. The focus is driven by fundamentals in approaching and applying biotechnologies in terms of engineering methods, special electronics, and special materials and systems. Borrowing simplicity and performance from the real life, biodevices cover a large spectrum of areas, from sensors, chips, and biometry to computing. One of the chief domains is represented by the biomedical biotechnologies, from instrumentation to monitoring, from simple sensors to integrated systems, including image processing and visualization systems. As the state-of-the-art in all the domains enumerated in the conference topics evolve with high velocity, new biotechnologies and biosystems become available. Their rapid integration in the real life becomes a challenge.

Brain-computing, biocomputing, and computation biology and microbiology represent advanced methodologies and mechanisms in approaching and understanding the challenging behavior of life mechanisms. Using bio-ontologies, biosemantics and special processing concepts, progress was achieved in dealing with genomics, biopharmaceutical and molecular intelligence, in the biology and microbiology domains. The area brings a rich spectrum of informatics paradigms, such as epidemic models, pattern classification, graph theory, or stochastic models, to support special biocomputing applications in biomedical, genetics, molecular and cellular biology and microbiology. While progress is achieved with a high speed, challenges must be overcome for large-scale bio-subsystems, special genomics cases, bionanotechnologies, drugs, or microbial propagation and immunity.

We welcomed academic, research and industry contributions. The conference had the following tracks:

- Biomedical technologies
- Bioinformatics
- Bioenvironment

We take here the opportunity to warmly thank all the members of the BIOTECHNO 2019 technical program committee, as well as all the reviewers. The creation of such a high quality conference program would not have been possible without their involvement. We also kindly thank all the authors who dedicated much of their time and effort to contribute to BIOTECHNO 2019. We truly believe that, thanks to all these efforts, the final conference program consisted of top quality contributions.

We also thank the members of the BIOTECHNO 2019 organizing committee for their help in handling the logistics and for their work that made this professional meeting a success.

We hope that BIOTECHNO 2019 was a successful international forum for the exchange of ideas and results between academia and industry and to promote further progress in the areas of bioinformatics, biocomputational systems and biotechnologies. We also hope that Athens, Greece provided a pleasant environment during the conference and everyone saved some time to enjoy the historic charm of the city.

BIOTECHNO 2019 Chairs

BIOTECHNO Steering Committee

Gilles Bernot, University Nice Sophia Antipolis, France

Birgit Gersbeck-Schierholz, Leibniz Universität Hannover, Germany

Hesham H. Ali, University of Nebraska at Omaha, USA

Erliang Zeng, University of Iowa, USA

Y-h. Taguchi, Chuo University, Japan

Hunter Moseley, University of Kentucky, USA

Magnus Bordewich, Durham University, UK

BIOTECHNO Industry/Research Advisory Committee

Steffen Heber, North Carolina State University, USA

Alexandru Floares, SAIA Institute, Romania
