The Fourth International Conference on Business Intelligence and Technology (BUSTECH 2014), held between May 25-29, 2014 in Venice, Italy, continued a series of events covering topics related to business process management and intelligence, integration and interoperability of different approaches, technology-oriented business solutions and specific features to be considered in business/technology development.

The term Business Intelligence (BI) covers a large spectrum of applications and technologies used to collect, store, interpret and decide on the information about company operations with the aim of helping corporate entities with a comprehensive status and knowledge on their business. BI is integrating with Warehouses (DWS), on-line analytic (OLAPS), corporate performance management (CPM), business process management (BPM), and other technology-oriented business solutions. Web technologies, semantics and ontology mechanisms are now used to mine, integrate and interpret distribute corporate data, either real-time or intermittent, by filtering noisy data, interpreting business data in context, enforcing trust and security in handling corporate data, and providing access to data from anywhere, at anytime, and via any media. The complexity, volume and intrinsic semantic of data needed for conducting business require a tailored IT infrastructure and advanced methodologies and technologies for timely building competitiveness by intelligent business decisions. With the large spectrum of emerging technologies, such as cloud computing, sensors environments, and mobility there is a need for specialized supporting tools and business/technology decisions to optimize the business process and business performance.

We take here the opportunity to warmly thank all the members of the BUSTECH 2014 Technical Program Committee, as well as all of the reviewers. The creation of such a high quality conference program would not have been possible without their involvement. We also kindly thank all the authors who dedicated much of their time and efforts to contribute to BUSTECH 2014. We truly believe that, thanks to all these efforts, the final conference program consisted of top quality contributions.

Also, this event could not have been a reality without the support of many individuals, organizations, and sponsors. We are grateful to the members of the BUSTECH 2014 organizing committee for their help in handling the logistics and for their work to make this professional meeting a success.

We hope that BUSTECH 2014 was a successful international forum for the exchange of ideas and results between academia and industry and for the promotion of progress in the field of business intelligence and technology.

We are convinced that the participants found the event useful and communications very open. We hope that Venice, Italy, provided a pleasant environment during the conference and everyone saved some time to enjoy the charm of the city.

BUSTECH 2014 Chairs:

Małgorzata Pankowska, University of Economics – Katowice, Poland
Hannes Werthner, Vienna University of Technology, Austria
Olga Levina, Berlin Institute of Technology, Germany
Oscar Ferrandez Escamez, University of Alicante, Spain
Maribel Yasmina Santos, University of Minho, Portugal
Pedro Soria-Rodriguez, Atos Origin - Madrid, Spain
Sokratis K. Katsikas, University of Piraeus, Greece
Michael Seitz, PRODATO Integration Technology GmbH, Germany
Michael Parkin, European Research Institute in Service Science (ERISS), The Netherlands
Yousra Odeh, University of the West of England (UWE), United Kingdom
Jeong In Lee, Electronics and Telecommunications Research Institute, Korea
Mike Hart, University of Cape Town, South Africa
