ICONS 2018

Forward

The Thirteenth International Conference on Systems (ICONS 2018), held between April 22, 2018 and April 26, 2018 in Athens, Greece, continued a series of events covering a broad spectrum of topics. The conference covered fundamentals on designing, implementing, testing, validating and maintaining various kinds of software and hardware systems. Several tracks were proposed to treat the topics from theory to practice, in terms of methodologies, design, implementation, testing, use cases, tools, and lessons learnt.

In the last years, new system concepts have been promoted and partially embedded in new deployments. Anticipative systems, autonomic and autonomous systems, self-adapting systems, or on-demand systems are systems exposing advanced features. These features demand special requirements specification mechanisms, advanced behavioral design patterns, special interaction protocols, and flexible implementation platforms. Additionally, they require new monitoring and management paradigms, as self-protection, self-diagnosing, self-maintenance become core design features.

The design of application-oriented systems is driven by application-specific requirements that have a very large spectrum. Despite the adoption of uniform frameworks and system design methodologies supported by appropriate models and system specification languages, the deployment of application-oriented systems raises critical problems. Specific requirements in terms of scalability, real-time, security, performance, accuracy, distribution, and user interaction drive the design decisions and implementations.

This leads to the need for gathering application-specific knowledge and develop particular design and implementation skills that can be reused in developing similar systems.

Validation and verification of safety requirements for complex systems containing hardware, software and human subsystems must be considered from early design phases. There is a need for rigorous analysis on the role of people and process causing hazards within safety-related systems; however, these claims are often made without a rigorous analysis of the human factors involved. Accurate identification and implementation of safety requirements for all elements of a system, including people and procedures become crucial in complex and critical systems, especially in safety-related projects from the civil aviation, defense health, and transport sectors.

Fundamentals on safety-related systems concern both positive (desired properties) and negative (undesired properties) aspects. Safety requirements are expressed at the individual equipment level and at the operational-environment level. However, ambiguity in safety requirements may lead to reliable unsafe systems. Additionally, the distribution of safety requirements between people and machines makes difficult automated proofs of system safety. This is somehow obscured by the difficulty of applying formal techniques (usually used for equipment-related safety requirements) to derivation and satisfaction of human-related safety requirements (usually, human factors techniques are used).

The conference had the following tracks:
- Security and protection systems
- Application-oriented systems
- Advanced embedded systems and applications/services
- Dynamics and Control on Cooling Technologies

We take here the opportunity to warmly thank all the members of the ICONS 2018 technical program committee, as well as all the reviewers. The creation of such a high quality conference program would not have been possible without their involvement. We also kindly thank all the authors who dedicated their time and effort to contribute to ICONS 2018. We truly believe that, thanks to all these efforts, the final conference program consisted of top quality contributions.

We also gratefully thank the members of the ICONS 2018 organizing committee for their help in handling the logistics and for their work that made this professional meeting a success.

We hope that ICONS 2018 was a successful international forum for the exchange of ideas and results between academia and industry and to promote further progress in the area of systems. We also hope that Athens, Greece, provided a pleasant environment during the conference and everyone saved some time to enjoy the historic charm of the city.

ICONS 2018 Chairs

ICONS Steering Committee
Marko Jäntti, University of Eastern Finland, Finland
Leszek Koszalka, Wroclaw University of Technology, Poland
Mark Austin, University of Maryland at College Park, USA
Zoubir Mammeri, IRIT - Paul Sabatier University, France
Raimund Ege, Northern Illinois University, USA
Andrew Snow, Ohio University, USA

ICONS Industry/Research Advisory Committee
Gary Weckman, Ohio University, USA
Tzung-Pei Hong [洪宗貝], National University of Kaohsiung, Taiwan
