SECURWARE 2017

Forward

The Eleventh International Conference on Emerging Security Information, Systems and Technologies (SECURWARE 2017), held between September 10-14, 2017 in Rome, Italy, was an event covering related topics on theory and practice on security, cryptography, secure protocols, trust, privacy, confidentiality, vulnerability, intrusion detection and other areas related to low enforcement, security data mining, malware models, etc.

Security, defined for ensuring protected communication among terminals and user applications across public and private networks, is the core for guaranteeing confidentiality, privacy, and data protection. Security affects business and individuals, raises the business risk, and requires a corporate and individual culture. In the open business space offered by Internet, it is a need to improve defenses against hackers, disgruntled employees, and commercial rivals. There is a required balance between the effort and resources spent on security versus security achievements. Some vulnerability can be addressed using the rule of 80:20, meaning 80% of the vulnerabilities can be addressed for 20% of the costs. Other technical aspects are related to the communication speed versus complex and time consuming cryptography/security mechanisms and protocols.

Digital Ecosystem is defined as an open decentralized information infrastructure where different networked agents, such as enterprises (especially SMEs), intermediate actors, public bodies and end users, cooperate and compete enabling the creation of new complex structures. In digital ecosystems, the actors, their products and services can be seen as different organisms and species that are able to evolve and adapt dynamically to changing market conditions.

Digital Ecosystems lie at the intersection between different disciplines and fields: industry, business, social sciences, biology, and cutting edge ICT and its application driven research. They are supported by several underlying technologies such as semantic web and ontology-based knowledge sharing, self-organizing intelligent agents, peer-to-peer overlay networks, web services-based information platforms, and recommender systems.

To enable safe digital ecosystem functioning, security and trust mechanisms become essential components across all the technological layers. The aim was to bring together multidisciplinary research that ranges from technical aspects to socio-economic models.

The conference had the following tracks:
- Information security
- Advances and challenges
- Security management
- Secure software development
- Security frameworks, architectures and protocols
- Critical Infrastructure Protection – Novel Concepts and Technologies
- Risk and security
We take here the opportunity to warmly thank all the members of the SECURWARE 2017 technical program committee, as well as all the reviewers. The creation of such a high quality conference program would not have been possible without their involvement. We also kindly thank all the authors that dedicated much of their time and effort to contribute to SECURWARE 2017. We truly believe that, thanks to all these efforts, the final conference program consisted of top quality contributions.

We also gratefully thank the members of the SECURWARE 2017 organizing committee for their help in handling the logistics and for their work that made this professional meeting a success.

We hope that SECURWARE 2017 was a successful international forum for the exchange of ideas and results between academia and industry and to promote further progress in the field of emerging security information, systems and technologies. We also hope that Rome, Italy provided a pleasant environment during the conference and everyone found some time to enjoy the historic charm of the city.

**SECURWARE 2017 Chairs**

**SECURWARE Steering Committee**

Yuichi Sei, The University of Electro-Communications, Japan  
Carla Merkle Westphall, Federal University of Santa Catarina, Brazil  
Hans-Joachim Hof, Technical University of Ingolstadt, Germany  
Eric Renault, Institut Mines-Télécom - Télécom SudParis, France  
Steffen Wendzel, Worms University of Applied Sciences, Germany  
Aspen Olmsted, College of Charleston, USA  
Calin Vladeanu, University Politehnica of Bucharest, Romania  
Geir M. Køien, University of Agder, Norway  
George Yee, Carleton University & Aptusinnova Inc., Ottawa, Canada  
Sokratis K. Katsikas, Norwegian University of Science & Technology (NTNU), Norway  
Hector Marco Gisbert, University of the West of Scotland, United Kingdom

**SECURWARE Research/Industry Chairs**

Rainer Falk, Siemens AG, Germany  
Mariusz Jakubowski, Microsoft Research, USA  
Malek ben Salem, Accenture Labs, USA  
Jiqiang Lu, Institute for Infocomm Research, Singapore  
Heiko Roßnagel, Fraunhofer IAO, Germany
Scott Trent, Tokyo Software Development Laboratory - IBM, Japan
Robert Forster, Edgemount Solutions S.à r.l., Luxembourg
Peter Kieseberg, SBA Research, Austria
Tzachy Reinman, Cisco, Israel
